

ABSTRACT OF THE DISCLOSURE

A cover sheet package is structured so as to satisfy the relationship $AP_1 \leq AP_2$, where AP_1 indicates an adhesive force for adhering a peeling sheet to an adhesive film of a cover sheet and AP_2 indicates an adhesive force for adhering a protective sheet to a resin film of the cover sheet. This package allows peeling only the peeling sheet adhered to the adhesive film of the cover sheet when a peeling force acts upon one end portion of the peeling sheet, without peeling the protective sheet from the resin film the cover sheet.
